

CLAIMS

We Claim:

1 1. A method for remotely controlling an animatronic
2 device using a web enabled phone comprising the step of:
3 operating a first server to communicate with a web
4 enabled phone, said first server operating to convert signals
5 received from said web enabled phone to animatronic control
6 signals and sending said animatronic control signals to a
7 second server for sending to a computer having a connected
8 animatronic device.

1 2. The method defined by Claim 1 wherein if said
2 animatronic control signals correspond to a movement which
3 said animatronic device is incapable of performing, said
4 commands are altered to correspond to a movement which said
5 animatronic device is capable of performing.
